TRAN ANH QUANG

AI Developer Intern

+84 352 413 335 ◇ Ha Noi City, Viet Nam ◇ taquangk63@gmail.com ◇ quangtran04

SUMMARY

I'm an Information Technology student at the University of Transport and Communications with a strong interest in Artificial Intelligence and Data. I have completed AI training through Viet Nguyen AI, participated in AI-related academic projects, and am currently working as an AI Intern at iVista Technology. I am seeking an AI Developer Internship where I can apply my knowledge of Machine Learning, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and software development while gaining hands-on experience in real-world AI applications.

EDUCATION

University of Transport and Communications (UTC) 09/2022 – 06/2027 (Expected)

Major: Information Technology

- **GPA**: 8.0/10.0

SKILLS

Technical Skills

- **Programming Languages**: Python, C#, Java, JavaScript
- **AI**: Machine Learning, Deep Learning (Basic), Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering
- **Databases**: PostgreSQL, SQL Server, MySQL
- **Tools**: Git, Docker, Postman, Visual Studio, VS Code
- **Other**: Object-Oriented Programming, RESTful APIs, JSON, Database Design, Debugging

Language

- English: B1 (Intermediate)
- Reading technical documentation
- Basic communication

EXPERIENCE

AI Intern — iVista Technology 07/2026 – Present

- Participated in AI software development projects under the guidance of senior developers.
- Worked with Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and AI chatbot systems.
- Assisted in processing documents, preparing datasets, and integrating AI services into web applications.
- Learned prompt engineering, document chunking, vector databases, and AI model integration.
- Collaborated with team members using Git, Docker, PostgreSQL, and REST APIs in an Agile environment.

PROJECTS

- **Bee Assistant - AI Chatbot** 05/2026 – 07/2026
  - Developed an AI-powered chatbot to answer beekeeping-related questions using Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG).
  - Processed and indexed documents to build a knowledge base for semantic search.
  - Integrated REST APIs and optimized prompt engineering to improve response quality.
  - **Technologies**: Python, LLM, RAG, Open WebUI, PostgreSQL, Docker, REST API, Git.
- **Used Car Price Prediction** 10/2025 – 12/2025
  - Built a machine learning model to predict used car prices based on vehicle specifications.

- Performed data preprocessing, feature engineering, model training, and evaluation.
- Developed a simple interface for users to input vehicle information and receive price predictions.
- **Technologies**: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Flask.
